Gentlemen: Our last order of Rose bushes and Asparagus plants arrived in good condition. The ten Roses which we planted last year are all in full bloom, a beautiful assortment and loaded with buds.

We were especially pleased with the dwarf Cortland apple, which we set out last spring, and has six good sized apples this year.

A "Whopper" of a Berry—Often Measuring an Inch Across

PRICE: No. 1 Selected plants, 3 for 90c; 6 for \$1.50; 10 for \$1.80; 25 for \$3.30.

This is the berry which has created such a sensation throughout the United States. A tremendous bearer of immense berries, often 1½ to 2 inches long, of the highest quality. No matter whether used fresh or canned, or in pies or jelly, it stands supreme. No other berry has ever been received so enthusiastically or planted so widely. Late July.

With some protection where the thermometer drops more than 10 degrees below zero, they can be grown almost anywhere other berries can be successfully grown.

For field culture spacing 8 feet apart in the rows with rows 8 feet apart is recommended. In smaller plots this may be varied to suit local conditions but plants should not be set closer than 6 feet in the rows.

These plants are strong, extra large, 2 years old. Will take hold at once and produce heavily the second year.

THORNLESS BOYSENBERRY

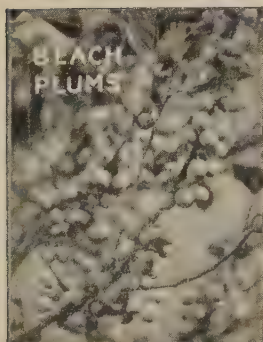

PRICE: No. 1, Selected plants, 3 for \$1.15; 6 for \$2.05; 10 for \$2.55; 25 for \$4.65.

This amazing new berry has the same big, juicy, delicious fruit as the regular Boysenberry. The vines are absolutely **thornless**, making the cultivation of same and picking easy. They can be trained to a trellis or wire. Late July.

HOW TO GROW BOYSENBERRIES

Set plants 8 by 8 ft. in and between rows. Let the vines creep on the ground the first year. To be safe, cover the plants with straw, leaves or soil before heavy frosts. When the buds appear, tie the vines to the wire or trellis about 2½ ft. above the ground. After fruiting, cut the plants to the ground and burn vines. Repeat this practice every year.

EVERGREENS *for Year 'Round Beauty*

All Evergreens are taken up expertly to secure the tender roots, the soil removed, and then the roots dipped in Transplantone and balled and burlapped in wet moss. By this method we are now able to eliminate 50 to 60 pounds of soil, making low cost express shipments possible. This method also insures excellent growth and quicker root action. In planting, remove burlap and use peat moss in hole around roots.

A Lovely Taxus Planting

Ontario, N. Y.,
May 15th, 1946.

Gentlemen:

Some time ago I wrote you that if the prune orchard of Mr. C. F. Davis bloomed this year, I thought it would be a good advertisement for your trees. I think you would have to go a good ways to find one 5 years old that has made such a growth. I think it will be in full bloom by the last of the week.

Very truly yours,
FRANK H. BROWN.

EVERGREENS FOR FOUNDATION AND GARDEN PLANTING

Grown scientifically by Maloney's. These fibrous rooted, full foliage specimen trees are extremely hardy and vigorous. Such fine rooted specimens transplant successfully in new locations.

A sectional view of healthy young Apple trees growing in the nursery row.

EVERGREENS AT ROCHESTER—SHOWN AS A GARAGE SCREEN

These young Maloney evergreens were planted last fall and will be carefully sheared and allowed to grow to a height of eight feet.

This planting allows the unsightly garage to be screened when viewed from the "picture window." During the winter months these evergreens will serve as a snow fence to keep snow from drifting in the driveway, and also add that bit of green foliage.

ONE OF MALONEY'S "NURSERIES ON THE HILL"

This top of the hill nursery develops and grows the hardiest fruit trees. The young Apple tree planting must withstand the extreme cold and bleak winter weather and be carefully graded before shipment to our customers.

A SECTIONAL VIEW OF MALONEY'S STORAGE CELLAR AND SALESROOM. In the spring and fall shipping seasons the storage cellar and outside sales shed are well stocked with Maloney's nursery products. All Mail Orders are packed and shipped from interior weather-conditioned storage cellars, temperature controlled to keep plants dormant.

Gentlemen: I'd just like you to know that I have been telling my neighbors about the Maloney's nursery. I also lent my book to several. I helped them in making selections in Fruits, Flowers, as they did not know just how to go about it. My praise is very high for Maloney's. Our trees are just beautiful that we have gotten from you. We expect to have Pears for the first time this year. You will notice that you have three new customers I have gotten for you.

Sincerely,
MRS. S. KROZIER.

Cultivated Blueberries and How to Grow Them

These giant, cultivated Blueberries are the result of scientific breeding by State Experimental Stations and are far superior to the ordinary wild Blueberries. Two to six bushes in your garden will furnish your family plenty of berries for fresh pies and canning. Highly profitable when grown for market.

Two different varieties should be planted to pollenate.

Blueberries can be planted in any good garden soil. Should bear first year.
